ARU Validator — Cheat sheet

Codes

Key	Code	Meaning
Y	Y	yes: the target species
S	Y + song	yes, singing
C	Y + call	yes, calling
N	N	no: not the target
U	U	unsure
O	—	go to the **Other species** list (below)
~~I~~ · ~~P~~	—	switched off: add `Insects` or `FROG-PEEP` in the list instead
X	—	clear this clip's label, its notes and its other species

U is left out of the calculations. After every code the next clip is selected. The selected clip has a thick black outline.

Moving and listening

Key	Action
Space	play the selected clip
click a clip	select it; click it again to set where playback starts
← → ↑ ↓	move between clips on the screen
Alt + a code key	give every unlabelled clip **on the screen** that code
►	next page (after the last clip the app stays put, unless you tick *Go to the next page after the last clip*)

Other species list

Under Notes: the other species HawkEars heard on the selected clip, one row each.

Where	Key	Action
anywhere	**O**	go to the first row
in the list	**↑ ↓** · **Space**	move between rows · play the clip
in the list	**y** · **n** · **u**	heard · not heard · unsure (the same key again clears it)
in the list	**a** · **Esc**	go to the **Add** box · leave the list
Add box	codes, **Enter**	add as heard, e.g. `BTNW NAWA` or `squirrel`

In the list **y n u** label the highlighted species, never the clip: **O**, **↓**, **y**, **Esc**, then **Y** for the clip. Mouse: **Y N U** on a row, **×** removes an added species. Tick **complete** when every species heard is labelled. Unknown codes show in **amber**, still saved. **Notes: Enter** saves and stays, **Esc** undoes; saved to the clip named above (*for clip-0012*).

Reviewing your labels

View & layout → Show: All · Y · N · U · Unclassified · Everything else (older I, P, O). It works on **All clips (review)** (it switches there from Top clips / Best clip per cell), so Show: U lists every U to go back over.

Occupancy databases

Control	What it does
Next unresolved	jump to the next unit × week that still needs work
coverage plot	click a square to open that unit × week
grey · red · green · white	to do · examined, no Y · Y found · no clip in this database

One **Y** finishes a unit × week. A unit × week with every clip examined and no Y is an absence. **Teal**: heard in another species' clip, already done. **Tip:** do common, vocal species first.

If the screen is too small

Drag the grey bar above the buttons **up**; click ‹ at the top of the left panel to hide it; or press **Ctrl** and **−**. The keys work without the buttons.
