ARU Validator — Cheat sheet

Codes

Key	Code	Meaning
Y	Y	yes: the target species
S	Y + song	yes, singing
C	Y + call	yes, calling
N	N	no: not the target
~~O~~	—	switched off: type other birds in **Other species** instead
I	I	insect
P	P	peeper (frog)
U	U	unsure
X	—	clear this clip's label (and its notes)

I and P count as "not the target"; U is left out of the calculations. After every code the next clip is selected. The selected clip has a thick black outline.

Moving and listening

Key	Action
Space	play the selected clip
click a clip	select it; click it again to set where playback starts
← → ↑ ↓	move between clips on the screen
Alt + a code key	give every unlabelled clip **on the screen** that code
►	next page (after the last clip the app stays put, unless you tick *Go to the next page after the last clip*)

Other species and notes

Where	Key	Action
Other species	type codes	e.g. `BTNW NAWA` (spaces or commas; case does not matter)
Other species or Notes	**Enter**	save and stay on the clip; then press the clip's code
Other species or Notes	**Esc**	undo what you typed and leave the box

The boxes save to the clip named above them (*for clip-0012*), even if you click another clip. So: type the other species first, **Enter**, then **Y**/**N**/**U**. A code the app does not know is shown in **amber**. It is still saved.

Reviewing your labels

View & layout → Show: All · Y · N · U · Unclassified · Everything else (I, P, older O). Use it with **View: All clips (review)** to go back over, say, every U.

Occupancy databases

Control	What it does
Next unresolved	jump to the next unit × week that still needs work
coverage plot	click a square to open that unit × week
grey · red · green · white	to do · examined, no Y · Y found · no clip in this database

One **Y** finishes a unit × week. A unit × week with every clip examined and no Y is an absence. **Teal**: heard in another species' clip, already done. **Tip:** do common, vocal species first.

If the screen is too small

- Drag the grey bar above the buttons **up** to make the clip area smaller.
- Click the **‹** at the top of the left panel to hide it; click again to show it.
- Press **Ctrl** and **−** to zoom the browser out.
- The keys above work without the buttons.
